

Logitech Extreme 3D Pro Profile Setup for DynaNav

1. Install supplied Logitech software as per their instructions from the CD. See below for Vista operating system.
2. Open up “Game Controllers” Start – Control Panel – Game Controllers
3. Select Logitech Extreme 3D Pro Controller and select “Properties”. Test Throttle, etc. for operation.
4. Select the “About” tab and mouse click on “Logitech Profiler”
5. Under the “Profile” pull down menu select “Import” then browse and select “DynaFlight Air.wgp” which will be found under C:\ Drive – Program Files – DynaNav – Ag Complete. Once “DynaFlight Air.wgp” is selected click on “Open”.
6. A window “Profile Properties” now will give a profile name of “DynaFlight Air” and you will need to browse to the Game file. Hit the “Browse” button and a window with “Look in:” should show up. Browse to “C:\Program Files\Dynamav\ Ag Complete”, now scroll to “myprog32”, select it and “Open”.
7. After this, under the “Profile” pull down menu “Select Profile” and click on “DynaFlight Air”.
8. Under the “Options” pull down, select “Global Profiler Settings” and check the selection for “Apply persistent profile and select “DynaFlight Air” as the persistent profile.
9. Also select “Start Profiler at system startup”
10. Select OK to the “Global Profile Settings” box, and then close the Logitech Profiler.
11. After this, run the Air Ag Simulator Start – Programs – DynaNav Ag – Air Ag Simulator. NOTE: If the buttons do not seem to work, make sure there is no a second “Flight Control by Joystick” program running. If there is, close the second one or close the Dynamav Air Ag Simulator and re-start the simulator.

Vista Operating System.

If you unable to call up Profiler or the Profiler is unable to recognize the Logitech Extreme 3D Joystick, then take the following steps:

1. Uninstall existing Logitech Gaming Software if you have installed
2. Download the Logitech Gaming software install from this link www.dynanav.com/downloads/lgs510.exe For Vista 64 bit computers, download from this link www.dynanav.com/downloads/lgs504_x64.exe . For Windows 7 64bit computers, download from this link www.dynanav.com/downloads/lgs510_x64.exe
3. After Downloading, remove the joystick from the USB port.
4. Right click on the “lgs502.exe”, click on “properties” and click on the “Compatibility” tab and check “Run in Administrative Mode” on.
5. Run the lgs502.exe software and step through the wizard.
6. When prompted, PLUG IN THE JOYSTICK and continue with the install.
7. When you finally get to the Point where the “Logitech Profiler” window is open, continue on from Step 5 above, under “Logitech Extreme 3D Pro Profile Setup....”
8. After this you may need to either Run any of the programs in “Administrative Mode” or perform the change as described in step 4 above to each of them.
